The Emergency Cervical Collar "Champion Collar" is the new double valve collar adjustable in different heights. Champion is the ideal tool for those who want to have, with a single article, different possibilities of immobilization. Its ergonomic design guarantees: a safe immobilization of the cervical spine, excellent maneuverability and speed in positioning, less intervention time in the choice of devices, an efficient positioning in the limited spaces of the emergency vehicles. It has a central hole for trachea control and tracheotomy. The end of the velcro allows the best detection of the grip while the male Velcro cast in the collar ensures efficiency and resistance of the presidio. It's radiotransparent and latex free.

INTENDED USE

Immobilization of the cervical spine, minimizes the flexed extension and ensures better control of axial rotation and lateral flexion movements.

INDICATIONS

Post-traumatic situations of the cervical area in which valid support and/or protection of the skeletal system and muscle bundles is necessary.

If the devices are used in the presence of skin lesions, protect the lesion with appropriate bandaging; in such situations do not use the device in contact direct with the injury.

STORAGE

Store in a dry place, away from sunlight, sources of heat and dust.

The product does not expire, but the planned duration is 10 years for materials.
